

Fabian Gubler

Refactoring of a Software System for Industry 4.0

Bachelor's Thesis

to achieve the university degree of
Bachelor of Arts

submitted to
University of St. Gallen

Supervisor
Prof. Dr. Ronny Seiger

Institute of Computer Science

Steckborn, May 2022

Abstract

This is a placeholder for the abstract. It summarizes the whole thesis to give a very short overview. Usually, this the abstract is written when the whole thesis text is finished.

List of Figures

1.1	1
-----	-------	---

1 Example Chapter

This is my text with an example Figure 1.1 and example citation Strunk and White, 1999 or Bringhurst (1993). And there is another “citation” which is located at the bottom¹.

Now you are able to write your own document. Always keep in mind: it’s the *content* that matters, not the form. But good typography is able to deliver the content much better than information set with bad typography. This template allows you to focus on writing good content while the form is done by the template definitions.

Figure 1.1: Example figure.

¹Voit, 2020.

2 Language and Writing Style

This chapter is an adopted version of a single chapter of Andrews thesis template Andrews, 2011 in its version from 2011-12-11.

The reason why Andrews, 2011 is not recommended to be used instead of this template is its more “traditional” L^AT_EX implementation. But the information contained regarding “How to write a thesis” is generally brilliant and worth reading.

Using this chapter here is meant as a teaser. If you do like this chapter, please go and download the full template to read its content: Andrews, 2011.

What was modified from the original chapter:

- strikethrough of bad examples
- minor typographical details
- technical modifications
 - moved citations from `\citet{}` and `\citep{}` to `\textcite{}` and `\cite{}`
 - changed quoting style to `\enquote{}`
 - created various commands and environments to encapsulate format

The classic reference for English writing style and grammar is Strunk and White (1999). The original text is now available for free online Strunk, 1918, so there is no excuse at all for writing poor English. Readers should consult it first, then continue reading this chapter. Another good free guide is McCaskill (1998).

Zobel (2004) and Dupré (1998) are guides specifically aimed at computer science students. Phillips and Pugh (2005) gives practical advice for PhD students.

The following Sections 2.3 and 2.4 are adapted from the CHI'94 language and writing style guidelines.

2.1 Some Basic Rules of English

There are a few basic rules of English for academic writing, which are broken regularly by my students, particularly if they are non-native speakers of English. Here are some classic and often encountered examples:

- *Never* use I, we, or you.

Write in the passive voice (third person).

Bad: ~~You can do this in two ways.~~

Good: There are two ways this can be done.

- *Never* use he or she, his or her.

Write in the passive voice (third person).

Bad: ~~The user speaks his thoughts out loud.~~

Good: The thoughts of the user are spoken out loud.

See Section 2.4 for many more examples.

- Stick to a consistent dialect of English. Choose either British or American English and keep to it throughout the whole of your thesis.
- Do *not* use slang abbreviations such as “it’s”, “doesn’t”, or “don’t”.

Write the words out in full: “it is”, “does not”, and “do not”.

Bad: ~~It’s very simple to...~~

Good: It is very simple to...

- Do *not* use abbreviations such as “e.g.” or “i.e.”.

Write the words out in full: “for example” and “that is”.

Bad: ~~...in a tree, e.g. the items...~~

Good: ...in a tree, for example the items...

- Do *not* use slang such as “a lot of”.
Bad: ~~There are a lot of features...~~
Good: There are many features...
- Do *not* use slang such as “OK” or “big”.
Bad: ~~...are represented by big areas.~~
Good: ...are represented by large areas.
- Do *not* use slang such as “gets” or “got”.
Use “becomes” or “obtains”, or use the passive voice (third person).
Bad: ~~The radius gets increased...~~
Good: The radius is increased...
Bad: ~~The user gets disoriented...~~
Good: The user becomes disoriented...
- *Never* start a sentence with “But”.
Use “However,” or “Nevertheless,”. Or consider joining the sentence to the previous sentence with a comma.
Bad: ~~But there are numerous possibilities...~~
Good: However, there are numerous possibilities...
- *Never* start a sentence with “Because”.
Use “Since”, “Owing to”, or “Due to”. Or turn the two halves of the sentence around.
- *Never* start a sentence with “Also”. Also should be placed in the middle of the sentence.
Bad: ~~Also the target users are considered.~~
Good: The target users are also considered.
- Do *not* use “that” as a connecting word.
Use “which”.
Bad: ~~...a good solution that can be computed easily.~~
Good: ...a good solution which can be computed easily.
- Do *not* write single-sentence paragraphs.
Avoid writing two-sentence paragraphs. A paragraph should contain at least three, if not more, sentences.

2.2 Avoid Austrianisms

I see these mistakes time and time again. Please do not let me read one of them in your work.

- “actual” \neq “current”
If you mean “aktuell” in German, you probably mean “current” in English.
Bad: ~~The actual selection is cancelled.~~
Good: The current selection is cancelled.
- “allows to” is not English.
Bad: ~~The prototype allows to arrange components...~~
Good: The prototype supports the arrangement of components...
- “enables to” is not English.
Bad: ~~it enables to recognise meanings...~~
Good: it enables the recognition of meanings...
- “according” \neq “corresponding”
Bad: ~~For each browser, an according package is created.~~
Good: For each browser, a corresponding package is created.
- “per default” is not English.
Use “by default”.
Bad: ~~Per default, the cursor is red.~~
Good: By default, the cursor is red.
- “As opposed to” is not English.
Use “In contrast to”.
Bad: ~~As opposed to C, Java is object-oriented.~~
Good: In contrast to C, Java is object-oriented.
- “*anything*-dimensional” is spelt with a hyphen.
For example: two-dimensional, three-dimensional.
- “*anything*-based” is spelt with a hyphen.
For example: tree-based, location-based.
- “*anything*-oriented” is spelt with a hyphen.
For example: object-oriented, display-oriented.
- “*anything*-side” is spelt with a hyphen.

For example: client-side, server-side.

- “*anything*-friendly” is spelt with a hyphen.

For example: user-friendly, customer-friendly.

- “*anything*-to-use” is spelt with hyphens.

For example: hard-to-use, easy-to-use.

- “realtime” is spelt with a hyphen if used as an adjective, or as two separate words if used as a noun.

Bad: ~~...using realtime shadow casting.~~

Good: ...using real-time shadow casting.

Bad: ~~...display the object in realtime.~~

Good: ...display the object in real time.

2.3 Clear Writing

The written and spoken language of your thesis is English as appropriate for presentation to an international audience. Please take special care to ensure that your work is adapted to such an audience. In particular:

- Write in a straight-forward style, using simple sentence structure.
- Use common and basic vocabulary. For example, use “unusual” for “arcane”, and “specialised” for “erudite”.
- Briefly define or explain all technical vocabulary the first time it is mentioned, to ensure that the reader understands it.
- Explain all acronyms and abbreviations. For example, the first time an acronym is used, write it out in full and place the acronym in parentheses.

Bad: ~~...When using the GUI version, the use may...~~

Good: ...When using the Graphical User Interface (GUI) version, the use may...

- Avoid local references. For example, not everyone knows the names of all the provincial capitals of Austria. If local context is important to the material, describe it fully.
- Avoid “insider” comments. Ensure that your whole audience understands any reference whose meaning you do not describe. For example,

do not assume that everyone has used a Macintosh or a particular application.

- Do not “play on words”. For example, do not use “puns”, particularly in the title of a piece. Phrases such as “red herring” require cultural as well as technical knowledge of English.
- Use unambiguous formats to represent culturally localised things such as times, dates, personal names, currencies, and even numbers. 9/11 is the 9th of November in most of the world.
- Be careful with humour. In particular, irony and sarcasm can be hard to detect if you are not a native speaker.
- If you find yourself repeating the same word or phrase too often, look in a thesaurus such as Roget (2004) and Roget (1995) for an alternative word with the same meaning.

Clear writing experts recognise that part of writing understandable documents is understanding and responding to the needs of the intended audience. It is the writer’s job to maintain the audience’s willingness to go on reading the document. Readers who are continually stumped by long words or offended by a pompous tone are likely to stop reading and miss the intended message.

2.4 Avoiding Gender Bias

Part of striking the right tone is handling gender-linked terms sensitively. Use of gender terms is controversial. Some writers use the generic masculine exclusively, but this offends many readers. Other writers are experimenting with ways to make English more neutral. Avoiding gender bias in writing involves two kinds of sensitivity:

1. being aware of potential bias in the kinds of observations and characterisations that it is appropriate to make about women and men, and
2. being aware of certain biases that are inherent in the language and of how you can avoid them.

The second category includes using gender-specific nouns and pronouns appropriately. Here are some guidelines for handling these problems:

- Use a gender-neutral term when speaking generically of people:

man	the human race
mankind	humankind, people
manpower	workforce, personnel
man on the street	average person
- Avoid clearly gender-marked titles. Use neutral terms when good ones are available. For example:

chairman	chairperson
spokesman	speaker, representative
policeman	police officer
stewardess	flight attendant
- If you are speaking of the holder of a position and you know the gender of the person who currently occupies the position, use the appropriate gender pronoun. For example, suppose the “head nurse” is a man:
Bad: ~~The head nurse must file her report every Tuesday.~~
Good: The head nurse must file his report every Tuesday.
- Rewrite sentences to avoid using gender pronouns. For example, use the appropriate title or job name again:
Bad: ~~Interview the user first and then ask him to fill out a questionnaire.~~
Good: Interview the user first and then ask the user to fill out a questionnaire.
- To avoid using the third person singular pronoun (his or her), recast your statement in the plural:
Bad: ~~Each student should bring his text to class.~~
Good: All students should bring their texts to class.
- Address your readers directly in the second person, if it is appropriate to do so:
Bad: ~~The student must send in his application by the final deadline date.~~
Good: Send in your application by the final deadline date.
- Replace third person singular possessives with articles.
Bad: ~~Every student must hand his report in on Friday.~~
Good: Every student must hand the report in on Friday.

- Write your way out of the problem by using the passive voice.
Bad: Each department head should do his own projections.
Good: Projections should be done by each department head.
- Avoid writing awkward formulations such as “s/he”, “he/she”, or “his/her”. They interfere when someone is trying to read a text aloud. If none of the other guidelines has been helpful, use the slightly less awkward forms “he or she”, and “his or hers”.

Remember, the goal is to avoid constructions that will offend your readers so much as to distract them from the content of your work.

2.5 Titles and Headings in Initial Caps

2.6 Use a Spelling Checker

In these days of high technology, spelling mistakes and typos are inexcusable. It is *very* irritating for your supervisor to have to read through and correct spelling mistake after spelling mistake which could have been caught by an automated spelling checker. Believe me, irritating your supervisor is not a good idea.

So, use a spelling checker *before* you hand in *any* version, whether it is a draft or a final version. Since this is apparently often forgotten, and sometimes even wilfully ignored, let me make it absolutely clear:

Use a spelling checker, please.

Use a spelling checker!

Use a spelling checker, you moron.

2.7 Use a Dictionary

If you are not quite sure of the meaning of a word, then use a dictionary. dictionary.com (2004) is a free English dictionary, Chemnitz (2004) and Leo (2004) are two very good English-German dictionaries.

2.8 Use a Thesaurus

If a word has been used several times already, and using another equivalent word might improve the readability of the text, then consult a thesaurus. Roget (2004) and Roget (1995) are free English thesauri.
